I like to built, theory is not that important for me, and test is, then up to the next experiment. An example : my first antenna on this QTH was a 1m tall helical wound antenna for 20m. The radial was a 1/4 wave. It worked, but it is nothing compared to a full size antenna. If I find a picture of it in my archive, I'll post it online.

In electrical engineering, the maximum power transfer theorem states that, to obtain maximum external power from a source with a finite internal resistance, the resistance of the load must equal the resistance of the source as viewed from its output terminals. Moritz von Jacobi published the maximum power (transfer) theorem around 1840; it is also referred to as "Jacobi's law".

Voltage divider network for PT100: As PT100 is a resistance thermometer i.e. its internal resistor changes according to temperature. A simple voltage divider with constant voltage source (say 5v), constant resistor and PT100 is connected as shown in figure 1.. The resistance is changing according to temperature as a result V out (voltage across PT100) also changes.
