Arthroscopic hip surgery is a minimally invasive procedure. The use of an arthroscope means that the procedure is done using two to three small incisions – each approximately 1/4" to 1/2" (0.6 cm to 1.5 cm) long. These small incisions, or “portals”, are used to insert the surgical instruments into the joint.

As the length of life and number and proportion of older persons increase in most industrialized and many developing nations, a central question is whether this population aging will be accompanied by sustained or improved health, an improving quality of life, and sufficient social and economic resources. The answer to this question lies partly in the ability of families and communities, as ...

The Medical Services Advisory Committee (MSAC) is an independent non-statutory committee established by the Australian Government Minister for Health in 1998.

MSAC - Medical Services Advisory Committee

A biopsy is a medical test commonly performed by a surgeon, interventional radiologist, or an interventional cardiologist. The process involves extraction of sample cells or tissues for examination to determine the presence or extent of a disease. The tissue is generally examined under a microscope by a pathologist; it may also be analyzed chemically. When an entire lump or suspicious area is ...
