Distillation, or classical distillation, is the process of separating the components or substances from a liquid mixture by using selective boiling and condensation. Dry distillation is the heating of solid materials to produce gaseous products (which may condense into liquids or solids). Dry distillation may involve chemical changes such as destructive distillation or cracking and is not ...

Experiments have been performed on an innovative stepped solar distillation-cum-active drying unit (SSD-ADU). The basin of the distillation unit is made in the stepped form and its underneath part works as a drying unit which is integrated with a solar flat plate collector. Thermal analysis of the SSD-ADU has been performed at water flow rates of 50 and 65 mL min<sup>-1</sup> in the distillation unit ...

Catalytic reforming usually is carried out by feeding a naphtha (after pretreating with hydrogen if necessary) and hydrogen mixture to a furnace where the mixture is heated to the desired temperature, 450°C-520°C (840°F-965°F), and then passed through fixed-bed catalytic reactors at hydrogen pressures of 100-1000 psi (7-68 atmospheres) (Fig. 2.16).

Greg: The use of feedforward control is often a missed opportunity because of the misinformation in the literature and the lack of guidance on implementation. Here we get a straightforward understanding and approach to feedforward control from Peter Morgan, who as leader of the ISA 5.9 Standards and Practices (S&P) working group for PID algorithms is responsible for generating a technical ...

The word "yeast" comes from Old English gist, gyst, and from the Indo-European root yes-, meaning "boil", "foam", or "bubble". Yeast microbes are probably one of the earliest domesticated organisms. Archaeologists digging in Egyptian ruins found early grinding stones and baking chambers for yeast-raised bread, as well as drawings of 4,000-year-old bakeries and breweries.
