Impulse J produced
from time t_1 to t_2 is

Get Free Engineering Physics Notes For 1st Year

defined to be $\int_{t_1}^{t_2} F dt$ where F is the resultant force applied from t_1 to t_2 . From Newton's second law, force is related to momentum p by $F = \frac{dp}{dt}$. Therefore, $\int_{t_1}^{t_2} F dt = \int_{p_1}^{p_2} dp = \Delta p$ where Δp is the change in linear momentum from time t_1 to t_2 . This is often called the impulse-momentum theorem (analogous to the work-energy theorem).. As a result, an impulse may also be regarded ...

Impulse (physics) - Wikipedia

For the levels to differ the pressure P_1 must be greater than P_2 , hence. $P_1 = P_2 + \rho gh$. If P_1 is the lung pressure, P_0 is the atmospheric pressure, then if the difference is 'h' then lung pressure can be calculated as follows.. $P_1 = P_0 + \rho gh$. Example. A man blows into one end of a U-tube containing
